Table 1. Source evidence and approved operations

Source operation	Evidence and qualification	Treatment
Standard Bank amount	Direct loan USD125m; combined support USD237.5m. Guarantee USD112.5m is derived by subtraction.	Use USD125m direct loan and USD112.5m derived guarantee; retain both instruments. The archive records USD1.25bn each.
Karuma overlap	Two signed contracts total approximately USD1.435bn for the same EPC package; strong overlap inference.	Retain one USD1.435bn package in archive FY2015. Signed-contract years are a separate overlay.
Standard Bank geography	South Africa is intermediary location; documented intended project region is Sub-Saharan Africa.	Retain observed cross-border regional support; exclude from classified-income denominator and country-assigned subset.
Dogger Bank basis	Two entries trace to guaranteed export-contract values; a third entry remains an unresolved financing-layer amount.	Contract exclusion removes two export-contract entries, retaining an unresolved financing entry. Whole-block exclusion removes all three.

Source-informed cases combine the amount, overlap and geography operations with one of the two financial-basis exclusions.
The archive is a reference reconstruction; treatments are not equally plausible estimates of true finance exposure.
